

ACELLUS TUTORIAL

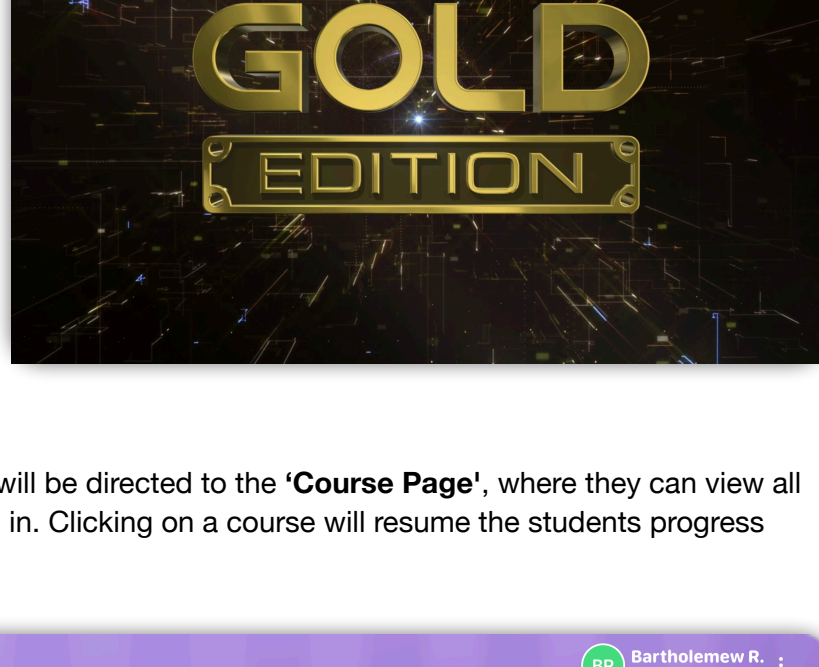

# Student Interface - Elementary

**ACELLUS GOLD**

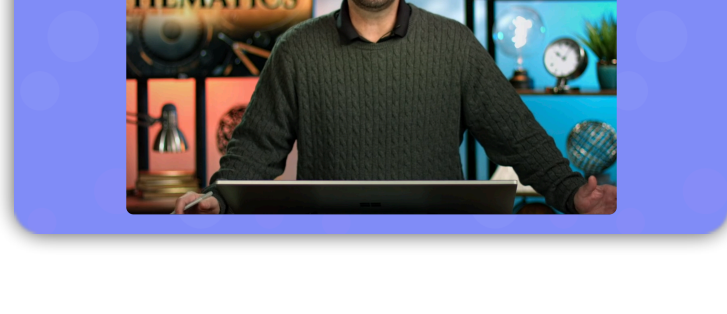

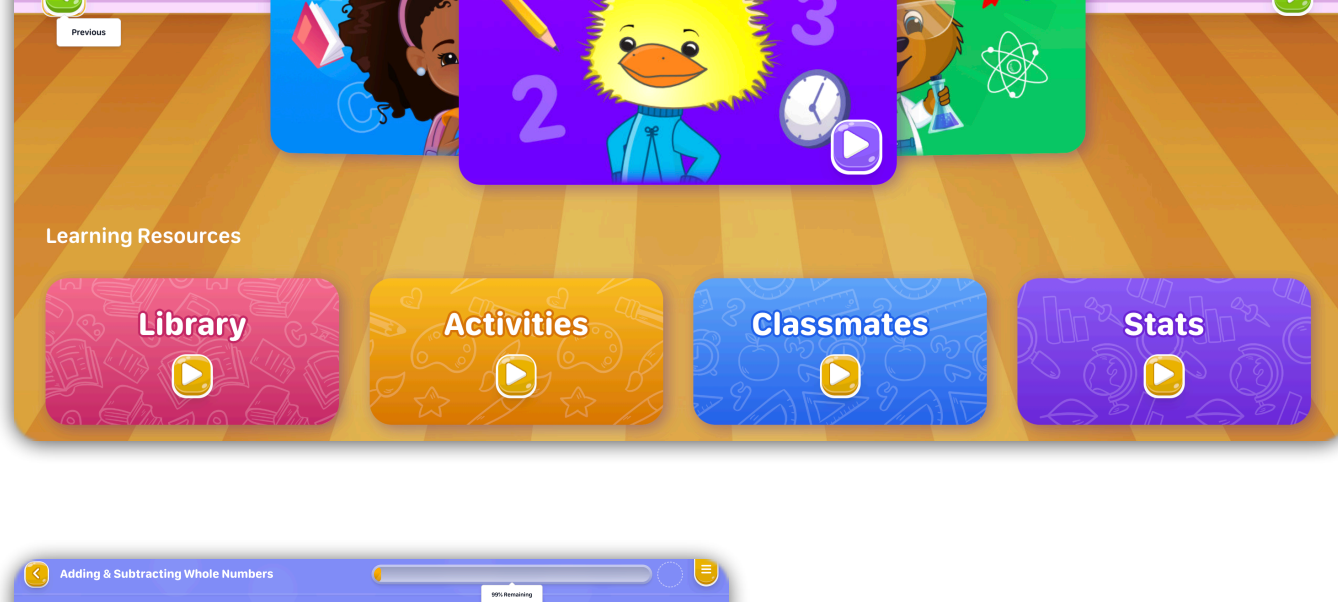

There are three student interfaces within Acellus Gold. The Elementary Interface consists of students in Pre-K through 3rd Grade.

This tutorial will navigate the student interface and explore the various functions and help resources available to students.

When students first sign in, they will be welcomed with an 'Orientation Video' that is specific to the interface they are enrolled in.

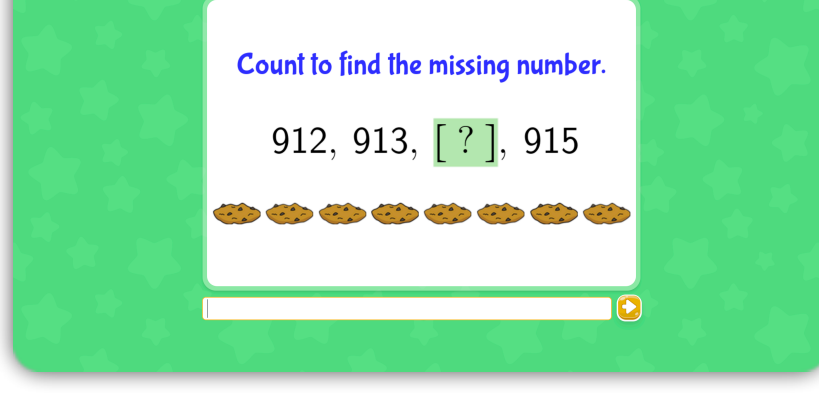

After the introduction video, students will be directed to the 'Course Page', where they can view all the courses they are currently enrolled in. Clicking on a course will resume the students progress from where they last left off.

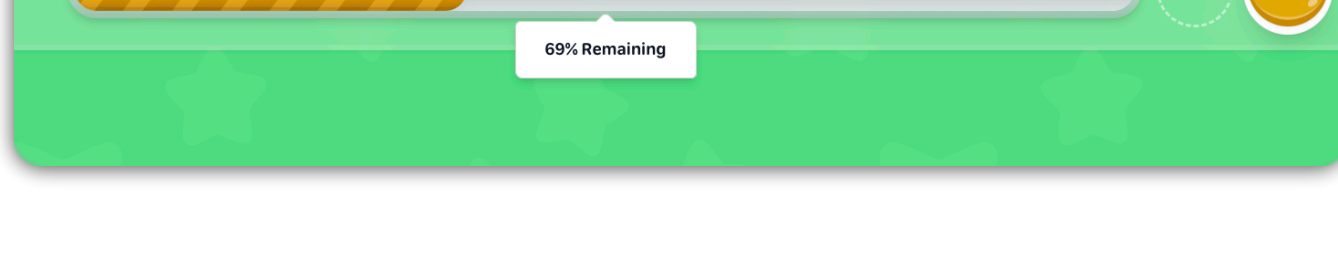

Lessons are short and concise, usually focusing on just one concept or learning objective.

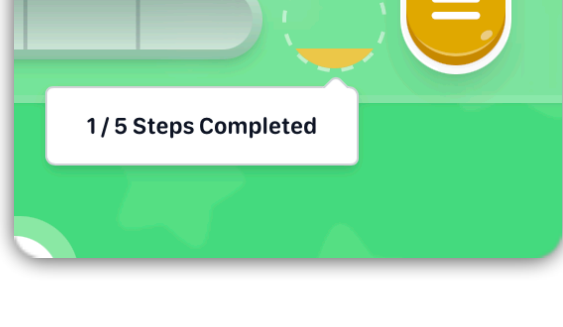

After each lesson, students are given problems to assess their understanding of the concepts.

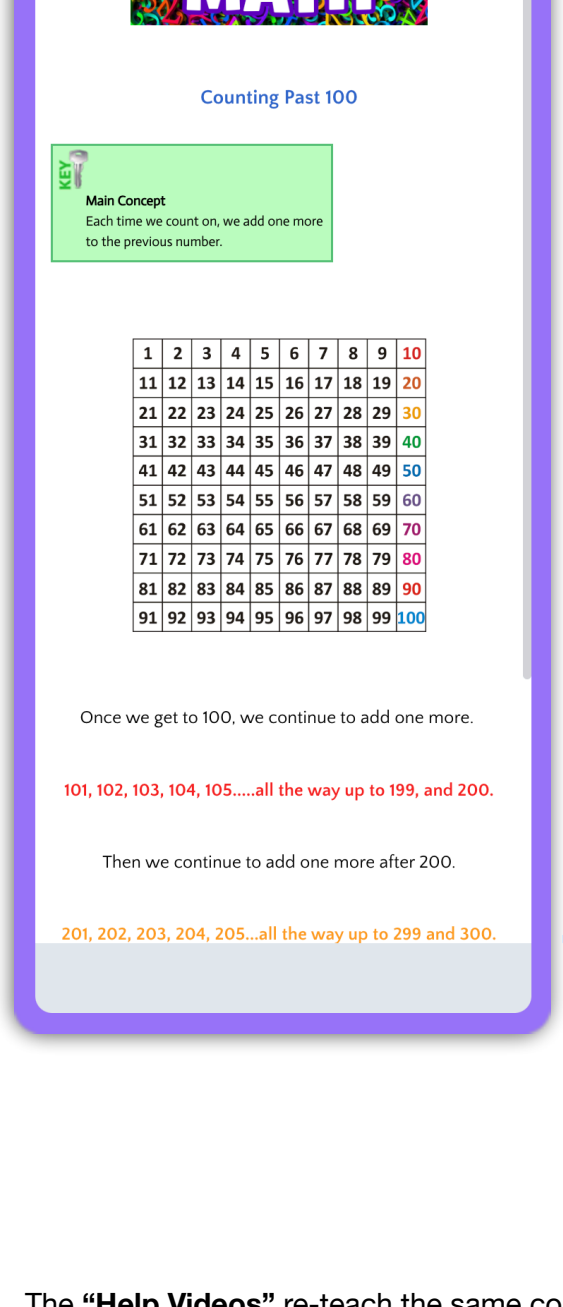

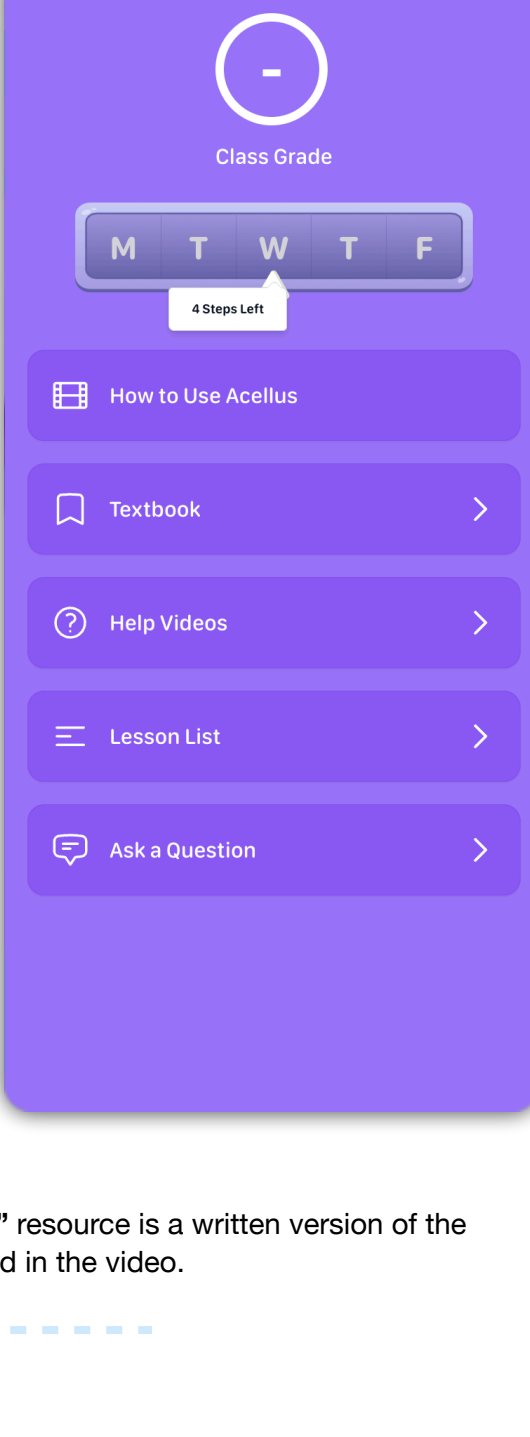

Students will be able to check how much work is remaining in their current step by hovering over the progress bar at the top of their screen.

There is also an indicator that shows how many steps they've completed towards their daily goal. This is here to help the student pace themselves throughout the course.

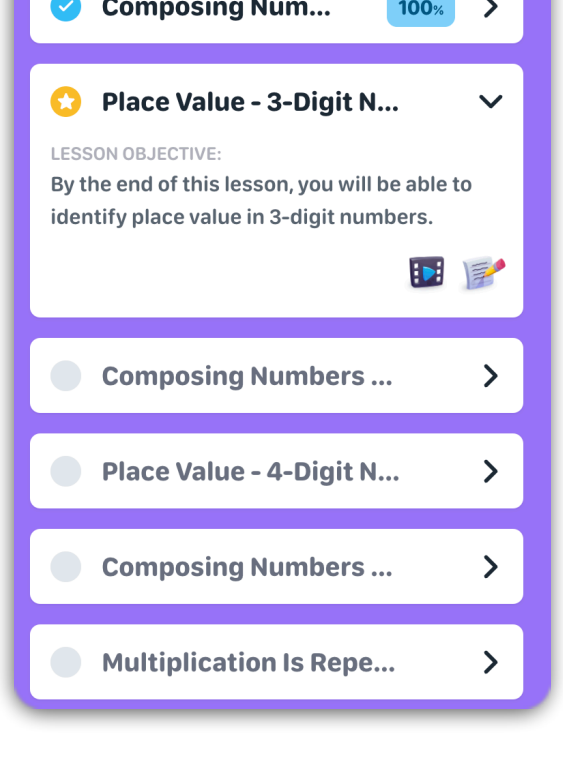

By clicking the 3-line menu tab, students will have access to see their course grade, status of the weekly goal, and various help resources.

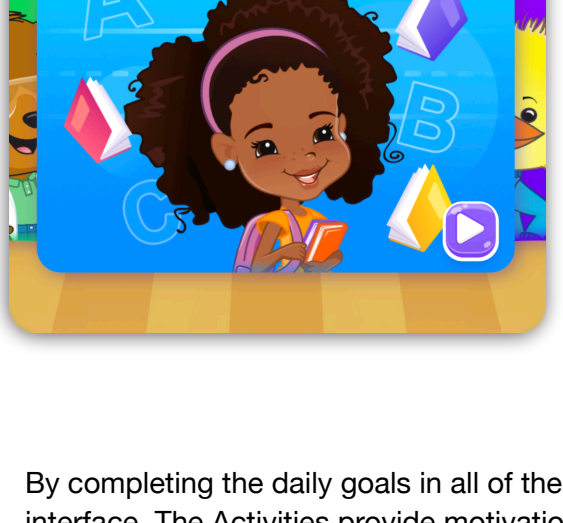

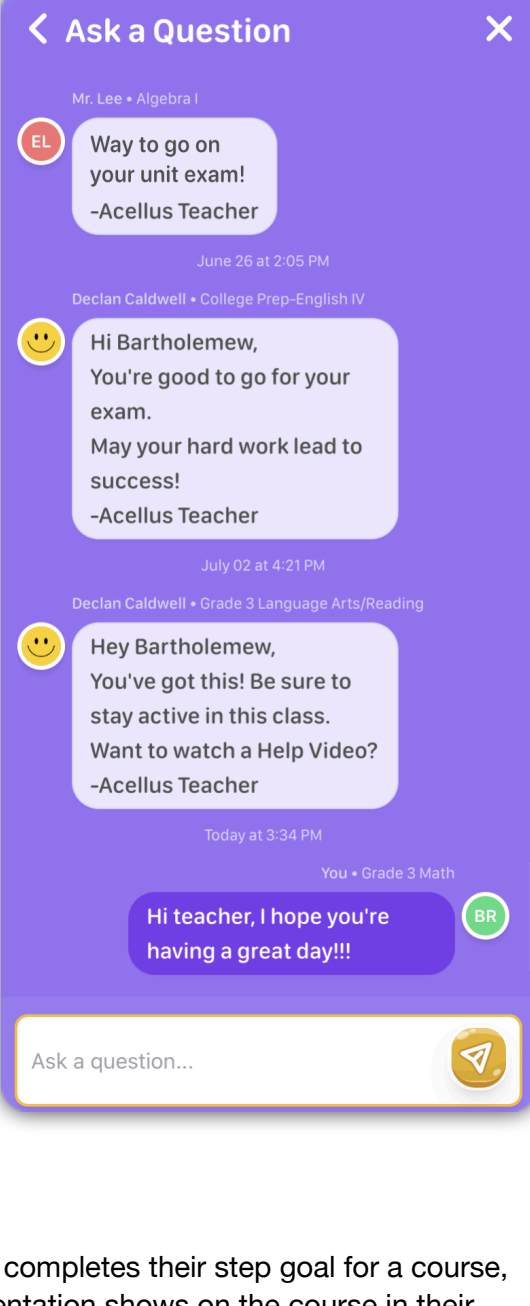

The "Textbook" resource is a written version of the concept covered in the video.

The "Help Videos" re-teach the same concept but from a different angle.

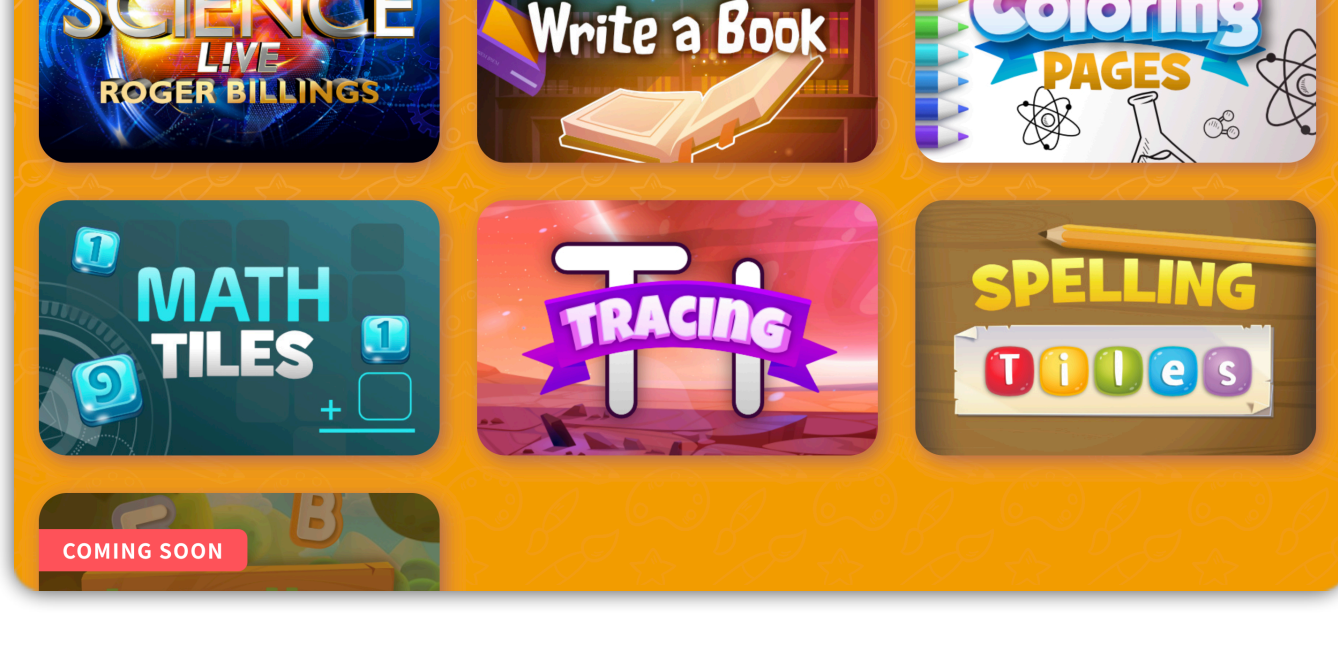

The "Lesson List" allows students to see what lessons are coming up and gives them the ability to re-watch or re-take lessons up to three times for a chance to improve their grade.

The final option available is the "Ask a Question" button, connecting the student directly to an active teacher monitoring the class.

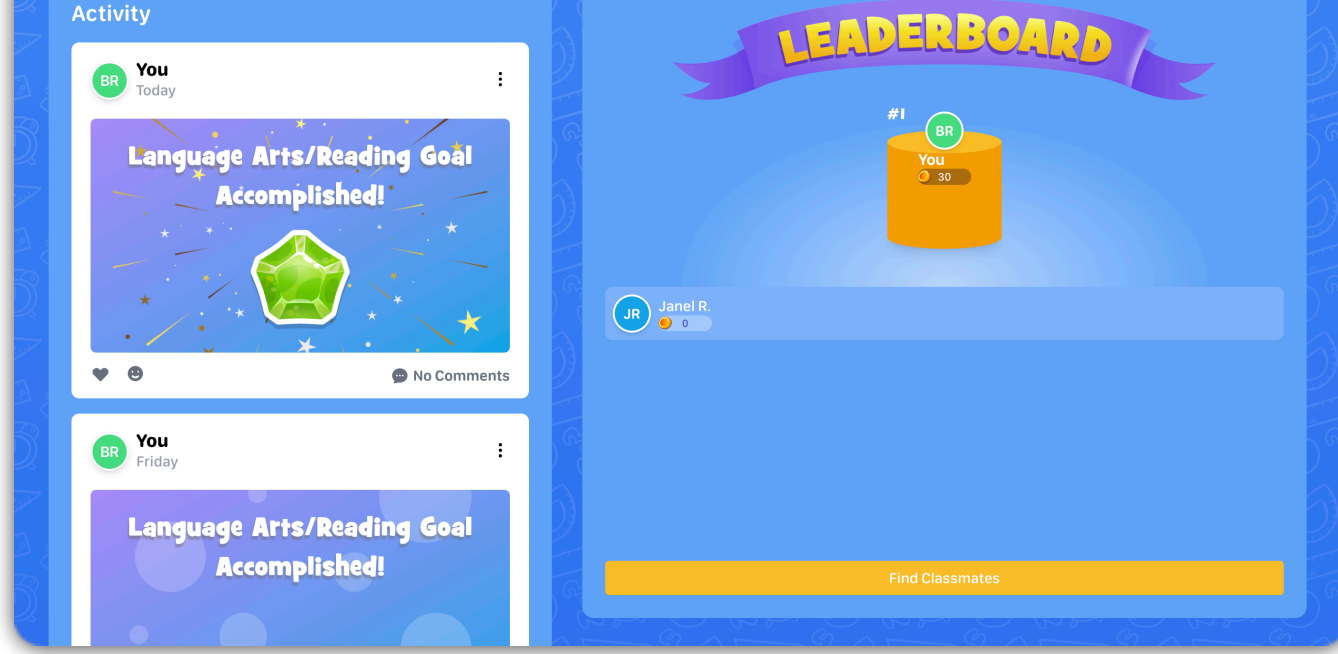

After a student completes their step goal for a course, a visual representation shows on the course in their main screen.

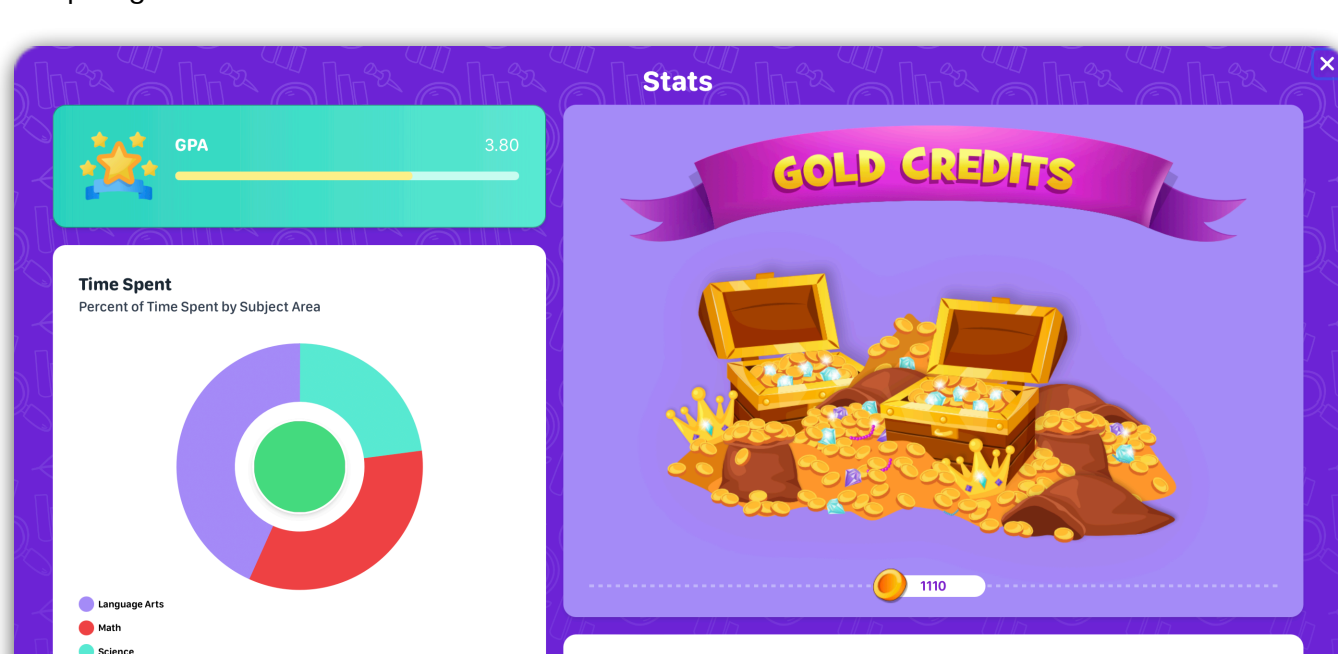

By completing the daily goals in all of their courses, students unlock the "Activities" tab in their interface. The Activities provide motivation for students to complete their assigned coursework, while enriching their learning with additional standards-based content.

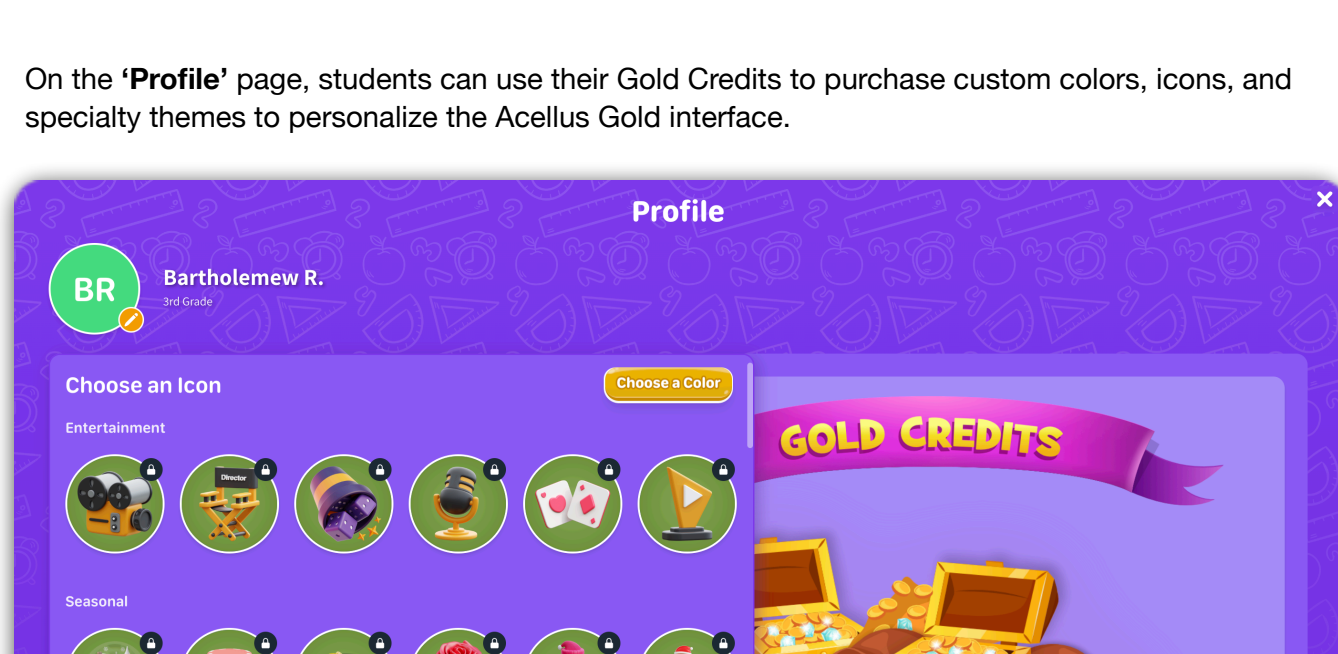

The "Classmates" page is a focused and positive environment allowing students to celebrate their accomplishments and voluntarily participate in friendly competitions with their classmates.

"Stats" is where students see an overview of their GPA, time spent per course, completion progress, and how many Gold Credits they've earned so far! Acellus awards students 'Gold Credits' when completing steps in their courses to emphasize the value of the knowledge they are acquiring.

On the 'Profile' page, students can use their Gold Credits to purchase custom colors, icons, and specialty themes to personalize the Acellus Gold interface.
